# timesheet

# timesheet

PHP timesheet app ("TimeTrack") at `/mnt/drives/10tb/10tb/web_servers/timesheet`.

- `index.php` — main UI; `index-preview.php` — preview variant
- `api/` — export endpoints (`/api/export.php`)
- `app/` — application code; `css/`, `js/`
- `architecture.md` — **read this first**, and update it after changes
- `llms.txt` — read-only Export API reference for agents (bearer key, keys are read-only by design)

Rules from `CLAUDE.md`: no Node, PHP syntax check after every PHP edit, double-check SQL syntax, keep `architecture.md` current.

```
php -l index.php
```
