

General Commands

Containers

List running containers

```
docker ps
```

List all containers

```
docker ps -a
```

Run a container from an image

```
docker run [OPTIONS] imagename[:tag]
```

Options:

- --rm (remove after close)
- -p 8000:8000 (bind docker port 8000 to computer port 8000)
- -d (run in background)
- --env-file .env (adds env file to container run)

Restart container

```
docker start container-name
```

Stop a container

```
docker stop container-name
```

Remove a container

```
docker rm myubuntu
```

Images

List images

```
docker images
```

Remove image

```
docker rmi IMAGE_ID
```

Build image

```
sudo docker build -t image_name .
```
